

## ABSTRACT OF THE DISCLOSURE

A color conversion definition coupling apparatus has a definition coupling section for creating the coupling  
5 color conversion definition in the manner as set forth below. When it is decided that two coupling areas are identical, associations defined by the space conversion section for the first color conversion definition, the area conversion section for the first color conversion  
10 definition, the area conversion section for the second color conversion definition, and the space conversion section for the second color conversion definition are sequentially coupled. When it is decided that two the coupling areas are not identical, associations defined by  
15 the space conversion section for the first color conversion definition and the space conversion section for the second color conversion definition are coupled with one another in accordance with a conversion algorithm for converting coordinates from one to another of two the color  
20 reproduction areas.
